Unlocking Leadership Mindtraps Jennifer Garvey Berger 2019 Author and consultant Jennifer Garvey Berger has worked with all types of leaders - from top executives at Google to nonprofit directors who are trying to make a dent in social change. She hears a version of the same plea from every client in nearly every sector around the world: "I know that complexity and uncertainty are testing my instincts, but I don't know which to trust. Is there some way to know what to do when I can't know what's next?" Her newest work is an answer to this plea. Using her background in adult development, complexity theories, and leadership consultancy, Garvey Berger discerns five pernicious and pervasive "mind traps" to frame the book. These are: the desire for simple stories, our sense that we are right, our desire to get along with others in our group, our fixation with control, and our constant quest to protect and defend our egos. In addition to understanding why these natural impulses steer us wrong in a fast-moving world, leaders will get powerful questions and approaches that help them escape these patterns.

Manufacturing Knowledge Richard Gillespie 1993-05-28 What motivates workers to work harder? What can management do to create a contented and productive workforce? Discussion of these questions would be incomplete without reference to the Hawthorne experiments, one of the most famous pieces of research ever conducted in the social and behavioral sciences. Drawing on the original records of the experiments and the personal papers of the researchers, Richard Gillespie has reconstructed the intellectual and political dynamics of the experiments as they evolved from the tentative experimentation to seemingly authoritative publications. Manufacturing Knowledge raises fundamental questions about the nature of scientific knowledge, and about the assumptions and evidence that underlay debates on worker productivity. *Managing Product and Service Development: Text and Cases* Stefan Thomke 2007 "With a balanced approach that covers product and service development, readers receive a broad and realistic idea of development issues in each major sector of our economy. How to Change Your Mind Michael Pollan 2018-05-15 "Pollan keeps you turning the pages . . . clear-eyed and assured."--New York Times *A #1 New York Times Bestseller*, *New York Times Book Review* 10 Best Books of 2018, and *New York Times* Notable Book A brilliant and brave investigation into the medical and scientific revolution taking place around psychedelic drugs--and the spellbinding story of his own life-changing psychedelic experiences When Michael Pollan set out to research how LSD and psilocybin (the active ingredient in magic mushrooms) are being used to provide relief to people suffering from difficult-to-treat conditions such as depression, addiction and anxiety, he did not intend to write what is undoubtedly his most personal book. But upon discovering how these remarkable substances are improving the lives not only of the mentally ill but also of healthy people coming to grips with the challenges of everyday life, he decided to explore the landscape of the mind in the first person as well as the third. Thus began a singular adventure into various altered states of consciousness, along with a dive deep into both the latest brain science and the thriving underground community of psychedelic therapists. Pollan sifts the historical record to separate the truth about these mysterious drugs from the myths that have surrounded them since the 1960s, when a handful of psychedelic evangelists inadvertently catalyzed a powerful backlash against what was then a promising field of research. A unique and elegant blend of science, memoir, travel writing, history, and medicine, *How to Change Your Mind* is a triumph of participatory journalism. By turns dazzling and edifying, it is the gripping account of a journey to an exciting and unexpected new frontier in our understanding of the mind, the self, and our place in the world. The true subject of Pollan's "mental travelogue" is not just psychedelic drugs but also the eternal puzzle of human consciousness and how, in a world that offers us both suffering and joy, we can do our best to be fully present and find meaning in our lives. **Experimentation Matters** Stefan H. Thomke 2003 Every company's ability to innovate depends on a process of experimentation whereby new products and services are created and existing ones improved. But the cost of experimentation often limits innovation. New technologies--including computer modeling and simulation--promise to lift that constraint by changing the economics of experimentation. Never before has it been so economically feasible to ask "what-if" questions and generate preliminary answers. These technologies amplify the impact of learning, paving the way for higher R&D performance and innovation and new ways of creating value for customers. In *Experimentation Matters*, Stefan Thomke argues that to unlock such potential, companies must not only understand the power of experimentation and new technologies, but also change their processes, organization, and management of innovation. He explains why experimentation is so critical to innovation, underscores the impact of new technologies, and outlines what managers must do to integrate them successfully. Drawing on a decade of research in multiple industries as diverse as automotive, semiconductors, pharmaceuticals, chemicals, and banking, Thomke provides striking illustrations of how companies drive strategy and value creation by accommodating their organizations to new experimentation technologies. As in the outcome of any effective experiment, Thomke also reveals where that has not happened, and explains why. In particular, he shows managers how to: implement "front-loaded" innovation processes that identify potential problems before resources are committed and design decisions locked in; experiment and test frequently without overloading their organizations; integrate new technologies into the current innovation system; organize for rapid experimentation; fail early and often, but avoid wasteful "mistakes"; and manage projects as experiments. Pointing to the custom integrated circuit industry--a multibillion dollar market--Thomke also shows what happens when new experimentation technologies are taken beyond firm boundaries, thereby changing the way companies create new products and services with customers and suppliers. Probing and thoughtful, *Experimentation Matters* will influence how both executives and academics think about experimentation in general and innovation processes in particular. Experimentation has always been the engine of innovation, and Thomke reveals how it works today.

The Longevity Economy Joseph F. Coughlin 2017-11-07 Oldness: a social construct at odds with reality that constrains how we live after middle age and stifles business thinking on how to best serve a group of consumers, workers, and innovators that is growing larger and wealthier with every passing day. Over the past two decades, Joseph F. Coughlin has been busting myths about aging with groundbreaking multidisciplinary research into what older people actually want -- not what conventional wisdom suggests they need. In *The Longevity Economy*, Coughlin provides the framing and insight business leaders need to serve the growing older market: a vast, diverse group of consumers representing every possible level of health and wealth, worth about \$8 trillion in the United States alone and climbing. Coughlin provides deep insight into a population that consistently defies expectations: people who, through their continued personal and professional ambition, desire for experience, and quest for self-actualization, are building a striking, unheralded vision of longer life that very few in business fully understand. His focus on women -- they outnumber men, control household spending and finances, and are leading the charge toward tomorrow's creative new narrative of later life -- is especially illuminating. Coughlin pinpoints the gap between myth and reality and then shows businesses how to bridge it. As the demographics of global aging transform and accelerate, it is now critical to build a new understanding of the shifting physiological, cognitive, social, family, and psychological realities of the longevity economy. *The Power of Experiments* Michael Luca 2021-03-02 How organizations--including Google, StubHub, Airbnb, and Facebook--learn from experiments in a data-driven world. Have you logged into Facebook recently? Searched for something on Google? Chosen a movie on Netflix? If so, you've probably been an unwitting participant in a variety of experiments--also known as randomized controlled trials--designed to test the impact of different online experiences. Once an esoteric tool for academic research, the randomized controlled trial has gone mainstream. No tech company worth its salt (or its share price) would dare make major changes to its platform without first running experiments to understand how they would influence user behavior. In this book, Michael Luca and Max Bazerman explain the importance of experiments for decision making in a data-driven world.

Reimagining India McKinsey & Company, Inc. 2013-11-19 Reimagining India brings together leading thinkers from around the world to explore the challenges and opportunities faced by one of the most important and least understood nations on earth. India's abundance of life--vibrant, chaotic, and tumultuous--has long been its foremost asset. The nation's rising economy and burgeoning middle class have earned India a place alongside China as one of the world's two indispensable emerging markets. At the same time, India's tech-savvy entrepreneurs and rapidly globalizing firms are upending key sectors of the world economy. But what is India's true potential? And what can be done to unlock it? McKinsey & Company has pulled in wisdom from many corners--social and cultural as well as economic and political--to launch a feisty debate about the future of Asia's "other superpower." *Reimagining India* features an all-star cast of contributors, including CNN's Fareed Zakaria; Mukesh Ambani, CEO of India's largest private conglomerate; Microsoft founder Bill Gates; Google chairman Eric Schmidt; Harvard Business School dean Nitin Nohria; award-winning authors Suketu Mehta (*Maximum City*), Edward Luce (*In Spite of the Gods*), and Patrick French (*India: A Portrait*); Nandan Nilekani, Infosys cofounder and chairman of the Unique Identification Authority of India; and a host of other leading executives, entrepreneurs, economists, foreign policy experts, journalists, historians, and cultural luminaries. These essays explore topics like the strengths and weaknesses of India's political system, growth prospects for India's economy, the competitiveness of Indian firms, India's rising international profile, and the rapid evolution of India's culture. Over the next decade India has the opportunity to show the rest of the developing world how open, democratic societies can achieve high growth and shared prosperity. Contributors offer creative strategies for seizing that opportunity. But they also offer a frank assessment of the risks that India's social and political fractures will instead thwart progress, condemning hundreds of millions of people to enduring poverty. *Reimagining India* is a critical resource for readers seeking to understand how this vast and vital nation is changing--and how it promises to change the world around us.

Transforming the Workforce for Children Birth Through Age 8 National Research Council 2015-07-23 Children are already

learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Cautionary Tales in Designed Experiments David S. Salsburg 2020-09-28 The beauty of DOE is about learning--from mistakes, from trying new things, and from working with others. *Cautionary Tales in Designed Experiments* aims to explain statistical design of experiments (DOE), Ronald Fisher's great innovation, to readers with minimal mathematical knowledge and skills. The book starts with historical examples and goes on to cover missteps, mismanaged experiments, learnings, the importance of randomization, and more. In later chapters, the book covers more statistical concepts, such as various designs for experiments, analysis of variance, Bayes' theorem in DOE, measurement, and when experiments fail. The book concludes by citing the ubiquity of statistical design of experiments.

Experimentation Works Stefan H. Thomke 2020-02-18 Don't fly blind. See how the power of experiments works for you. When it comes to improving customer experiences, trying out new business models, or developing new products, even the most experienced managers often get it wrong. They discover that intuition, experience, and big data alone don't work. What does? Running disciplined business experiments. And what if companies roll out new products or introduce new customer experiences without running these experiments? They fly blind. That's what Harvard Business School professor Stefan Thomke shows in this rigorously researched and eye-opening book. It guides you through best practices in business experimentation, illustrates how these practices work at leading companies, and answers some fundamental questions: What makes a good experiment? How do you test in online and brick-and-mortar businesses? In B2B and B2C? How do you build an experimentation culture? Also, best practice means running many experiments. Indeed, some hugely successful companies, such as Amazon, Booking.com, and Microsoft, run tens of thousands of controlled experiments annually, engaging millions of users. Thomke shows us how these and many other organizations prove that experimentation provides significant competitive advantage. How can managers create this capability at their own companies? Essential is developing an experimentation organization that prizes the science of testing and puts the discipline of experimentation at the center of its innovation process. While it once took companies years to develop the tools for such large-scale experiments, advances in technology have put these tools at the fingertips of almost any business professional. By combining the power of software and the rigor of controlled experiments, today's managers can make better decisions, create magical customer experiences, and generate big financial returns. *Experimentation Works* is your guidebook to a truly new way of thinking and innovating.

Alive at Work Daniel M. Cable 2018-03-06 Poll after poll has confirmed that an astonishing number of workers are disengaged from their work. Why is this happening? And how can we fix the problem? In this bold, enlightening book, social psychologist and professor Daniel M. Cable takes leaders into the minds of workers and reveals the surprising secret to restoring their zest for work. Disengagement isn't a motivational problem, it's a biological one. Humans aren't built for routine and repetition. We're designed to crave exploration, experimentation, and learning--in fact, there's a part of our brains, which scientists have coined "the seeking system," that rewards us for taking part in these activities. But the way organizations are run prevents many of us from following our innate impulses. As a result, we shut down. Things need to change. More than ever before, employee creativity and engagement are needed to win. Fortunately, it won't take an extensive overhaul of your organizational culture to get started. With small nudges, you can personally help people reach their fullest potential. *Alive at Work* reveals: How to encourage people to bring their best selves to work and use their greatest strengths to help your organization flourish How to build creative environments that motivate people to share ideas, work smarter, and embrace change How to enhance people's connection to their work and your customers How to create personalized experiences that help people feel a deeper sense of purpose Filled with fascinating stories from the author's extensive research, *Alive at Work* is the inspirational guide that you need to tap into the passion, creativity, and purpose fizzing beneath the surface of every person who falls under your leadership.

Through Two Doors at Once Anil Ananthaswamy 2018-10-05 Many great scientific minds have grappled with the 'double slit' experiment. Thomas Young devised it in the early 1800s to show that light behaves like a wave, and in doing so opposed Isaac Newton's view that light is made of particles. But then Albert Einstein showed that light comes in quanta, or particles. Thus, quantum mechanics was born. This led to a fierce debate between Einstein and Niels Bohr over the nature of reality-subatomic bits of matter and its interaction with light-as revealed by the double slit experiment. Richard Feynman held that it embodies the central mystery of the quantum world. Decade after decade, hypothesis after hypothesis, scientists have returned to this ingenious experiment to help them answer deeper and deeper questions about the fabric of the universe. How can a single particle behave both like a particle and a wave? Does a particle, or indeed reality, exist before we look at it, or does looking create reality, as the textbook 'Copenhagen interpretation' of quantum mechanics seems to suggest? How can particles influence each other faster than the speed of light? Is there

a place where the quantum world ends and the familiar classical world of our daily lives begins, and if so, can we find it? And if there's no such place, then does the universe split into two each time a particle goes through the double slit? With his extraordinarily gifted eloquence, Anil Ananthaswamy travels around the world and through history, down to the smallest scales of physical reality we have fathomed. It is the most fantastic voyage you can take.

Unlocking Creativity Michael A. Roberto 2019-01-07 Tear down the obstacles to creative innovation in your organization Unlocking Creativity is an exploration of the creative process and how organizations can clear the way for innovation. In many organizations, creative individuals face stubborn resistance to new ideas. Managers and executives oftentimes reject innovation and unconventional approaches due to misplaced allegiance to the status quo. In this climate of stifled creativity and inflexible adherence to conventional wisdom, potentially game-changing ideas are dismissed outright. Senior leaders claim to value creativity, yet often lack the knowledge to provide a creative framework. Unlocking Creativity offers effective methods and real-world examples of how the most successful organizations create cultures of innovation and experimentation. Best-selling author and scholar Michael Roberto presents a thorough investigation of organizational obstacles to creative thought. Highly relevant to the growth crises many enterprises face in today's economic landscape, this book examines how to break barriers to spark creativity and foster new ideas. This insightful and informative work allows business executives, senior managers, and organization leaders to: Recognize the six organizational mindsets that impede creativity and innovation Learn how to tear down the barriers that obstruct the creative process Create an environment that allows talented people to thrive Encourage creative collaboration in teams throughout an organization Leaders do not have to conceive innovative ideas, but rather open the path for curious and creative employees within their organization. Experimentation Matters Stefan H. Thomke 2003-08-05 Every company's ability to innovate depends on a process of experimentation whereby new products and services are created and existing ones improved. But the cost of experimentation is limiting. New technologies--including computer modeling and simulation--promise to lift that constraint by changing the economics of experimentation. They amplify the impact of learning, creating the potential for higher R&D performance and innovation and new ways of creating value for customers. Stefan H. Thomke argues that to unlock such potential, companies must not only understand the power of new technologies for experimentation, but also fundamentally change their processes, organization, and management of innovation. He shows why experimentation is so critical to innovation, explains the impact of new technologies, and outlines what managers must do to integrate them successfully.

The Body Keeps the Score Bessel van der Kolk, M.D. 2014-09-25 #1 New York Times bestseller "Essential reading for anyone interested in understanding and treating traumatic stress and the scope of its impact on society." –Alexander McFarlane, Director of the Centre for Traumatic Stress Studies A pioneering researcher transforms our understanding of trauma and offers a bold new paradigm for healing in this New York Times bestseller Trauma is a fact of life. Veterans and their families deal with the painful aftermath of combat; one in five Americans has been molested; one in four grew up with alcoholics; one in three couples have engaged in physical violence. Dr. Bessel van der Kolk, one of the world's foremost experts on trauma, has spent over three decades working with survivors. In *The Body Keeps the Score*, he uses recent scientific advances to show how trauma literally reshapes both body and brain, compromising sufferers' capacities for pleasure, engagement, self-control, and trust. He explores innovative treatments—from neurofeedback and meditation to sports, drama, and yoga—that offer new paths to recovery by activating the brain's natural neuroplasticity. Based on Dr. van der Kolk's own research and that of other leading specialists, *The Body Keeps the Score* exposes the tremendous power of our relationships both to hurt and to heal—and offers new hope for reclaiming lives.
