Learning and Teaching Early Math Douglas H. Clements 2014-05-23 In this important book for pre- and in-service teachers, early math experts Douglas Clements and Julie Sarama show how "learning trajectories" help diagnose a child’s level of mathematical understanding and provide guidance for teaching. By focusing on the inherent delight and curiosity behind young children’s mathematical reasoning, learning trajectories ultimately make teaching more joyous. They help teachers understand the varying levels of knowledge exhibited by individual students, which in turn allows them to better meet the learning needs of all children. Using straightforward, no-nonsense language, this book summarizes the current research about how children learn mathematics, and how to build on what children already know to realize more effective teaching. This second edition of Learning and Teaching Early Math remains the definitive, research-based resource to help teachers understand the learning trajectories of early mathematics and become quintessential professionals. Updates to the new edition include: • Explicit connections between Learning Trajectories and the new Common Core State Standards. • New coverage of patterns and patterning. • Incorporation of hundreds of recent research studies.

Kindergarten Transition and Readiness Andrew J. Mashburn 2018-06-09 This book presents a comprehensive overview of children’s transitions to kindergarten as well as proven strategies that promote their readiness. It presents theories and research to help understand children’s development during the early childhood years. It describes evidence-based interventions that support children in developmental areas essential to school success, including cognitive, social-emotional, and self-regulatory skills. Chapters review prekindergarten readiness programs designed to promote continuity of learning in anticipation of the higher grades and discuss transitional concerns of special populations, such as non-native speakers, children with visual and other disabilities, and children with common temperamental issues. The volume concludes with examples of larger-scale systemic approaches to supporting children’s development during the transition to kindergarten, describing a coherent system of early childhood education that promotes long-term development. Featured topics include: Consistency in children’s classroom experiences and implications for early childhood development. Changes in school readiness in U.S. kindergarteners. Effective transitions to kindergarten for low-income children. The transition into kindergarten for English language learners. The role of close teacher-child relationships during the transition into kindergarten. Children’s temperament and its effect on their kindergarten transitions. Kindergarten Transition and Readiness is a must-have resource for researchers, clinicians and related professionals, and graduate students in child and school psychology, educational psychology, social work, special education, and early childhood education.

Transforming the Workforce for Children Birth Through Age 8 National Research Council 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Sustaining Early Childhood Learning Gains Arthur J. Reynolds 2019-01-10 How gains from early childhood experiences are initiated, increased, sustained, and affect life-course development are fundamental to science and society. They also have increasing policy relevance, given public investments in early learning programs and the need to measure their effectiveness in promoting well-being. With contributions from leading researchers across many disciplines, this book emphasizes key interventions and practices over the first decade of life and the elements and strategies through which gains can be enhanced by schools, families, communities, and public institutions. Three critical themes are addressed: firstly, the importance of documenting and understanding the impact of investments in early childhood and school-age years. Secondly, increased priority on elements and principles for scaling effective programs and practices to benefit all children. Thirdly, a focus on multiple levels of strategies for sustaining gains and promoting long-term effects, ranging from early care and family engagement to school reform, state, and federal policy.

Capitalism at the Crossroads Stuart L. Hart 2010-06-15 Today’s era of economic crisis has sent a powerful message: The age of “mercenary” capitalism is ending. We must finally embark on a new age of sustainable, stakeholder-based capitalism. While enlightened executives and policymakers understand the critical need for change, few have tangible plans for making it happen. In Capitalism at the Crossroads: Next Generation Business Strategies for a Post-Crisis World, Third Edition, Stuart L. Hart presents new strategies for identifying sustainable products, technologies, and business models that will drive urgently needed growth and help solve social and

environmental problems at the same time. Drawing on his experience consulting with top companies and NGOs worldwide, Hart shows how to craft your optimal sustainability strategy and overcome the limitations of traditional “greening” approaches. In this edition, he presents new and updated case studies from the United States and around the world, demonstrating what’s working and what isn’t. He also guides business leaders in building an organizational “infrastructure for sustainability”--one that can survive budgeting and boardrooms, recharging innovation and growth throughout your enterprise. Discover: · The new business case for pursuing sustainable capitalism · Sustainability strategies that go far beyond environmental sensitivity · How to fully embed your enterprise in the local context--and why you should · Tactics for making long-term sustainability work in a short-term world

Math Stickers Jennifer Neumann 2008-01-22 Stickers can offer far more than amusement. In Math Stickers the stickers become manipulatives, requiring a child to locate the correct sticker in order to solve the problems, creating an interactive learning experience. Soon kids will be able to recognize that each numeral has a unique name and shape, and each numerical symbol represents a number. This, along with counting objects, builds important early math skills. Add colorful illustrations, games, matching and reward stickers to the mix and a child can’t help but be engaged in this colorful world of numbers. See for yourself--engage your child in Math Readiness today. Get your child stuck on learning!

It has been known for a long time that motor development is critical for children’s understanding of the physical and social world. Learning occurs through dynamic interactions and exchanges with the physical and the social world, and consequently movements of eyes and head, arms and legs, and the entire body are a critical during learning. At birth, we start with relatively poorly developed motor skills but soon gain eye and head control, learn to reach, grasp, sit, and eventually to crawl and walk on our own. The opportunities arising from each of these motor milestones are profound and open new and exciting possibilities for exploration and interactions, and learning. Consequently, several theoretical accounts of child development suggest that growth in cognitive, social, and perceptual domains are influenced by infants’ own motor experiences. Recently, empirical studies have started to unravel the direct impact that motor skills may have over other domains of development. This volume is part of this renewed interest and includes reviews of previous findings and recent empirical evidence for associations between the motor domain and other domains from leading researchers in the field of child development. We hope that these articles will stimulate further research on this interesting question.

Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn 2015-09-28 Learning to read, and to spell are two of the most important cultural skills that must be acquired by children, and for that matter, anyone learning a second language. We are not born with an innate ability to read. A reading system of mental representations that enables us to read must be formed in the brain. Learning to read in alphabetic orthographies is the acquisition of such a system, which links mental representations of visual symbols (letters) in print words, with pre-existing phonological (sound) and semantic (comprehension) cognitive systems for language. Although spelling draws on the same representational knowledge base and is usually correlated with reading, the acquisition processes involved are not quite the same. Spelling requires the sequential production of letters in words, and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography. Reading, on the other hand, requires only the recognition of a word for pronunciation. Hence, spelling is more difficult than reading, and learning to spell may necessitate more complete representations, or more conscious access to them. The learning processes that children use to acquire such cognitive systems in the brain, and whether these same processes are universal across different languages and orthographies are central theoretical questions. Most children learn to read and spell their language at the same time, thus the co-ordination of these two facets of literacy acquisition needs explication, as well as the effect of different teaching approaches on acquisition. Lack of progress in either reading and/or spelling is also a major issue of concern for parents and teachers necessitating a cross-disciplinary approach to the problem, encompassing major efforts from researchers in neuroscience, cognitive science, experimental psychology, and education. The purpose of this Research Topic is to summarize and review what has been accomplished so far, and to further explore these general issues. Contributions from different perspectives are welcomed and could include theoretical, computational, and empirical works that focus on the acquisition of literacy, including cross-orthographic research.

Building Blocks Gene I. Maeroff 2015-01-27 A student’s entire journey along the educational spectrum is affected by what occurs—and, crucially, by what does not occur—before the age of eight or nine. Yet early learning has never received the attention it deserves and needs. In his latest book, education expert Gene Maeroff takes a hard look at early learning and the primary grades of schooling. Building Blocks offers a concrete and groundbreaking strategy for improving early education. Filled with colorful descriptions and anecdotes from Maeroff’s visits to schools around the country, Building Blocks creates a rich portrait of education in America, ranging from math lessons imported from Singapore in Massachusetts to serious but joyful kindergartens in California. He speaks of the need for schools to prepare for the burgeoning enrollment of youngsters from immigrant families and for all children to acquire the habits and dispositions that will make them committed and productive students. Maeroff issues a call to action for policy makers and parents alike.

Advancing Knowledge and Building Capacity for Early Childhood Research Sharon Ryan 2021-01-20 This volume employs a multidisciplinary approach to research on a high-profile topic very much on the agenda of state and national policy leaders: early childhood development and education. It aims to reflect how scholarly perspectives shape the contours of knowledge generation, and to illuminate the gaps that prevent productive interchange among scholars who value equity in the opportunities available to young children, their families, and teachers/caregivers. The editors and authors identify and prioritize critical research areas; assess the state of the field in terms of promising research designs and methodologies; and identify capacity-building needs and potential cross-group collaborations.
