Interpreting Historical Keyboard Music Andrew Woolley 2016-05-23
Research in the field of keyboard studies, especially when intimately connected with issues of performance,

is often concerned with the immediate working environments and practices of musicians of the past. An important pedagogical tool, the keyboard has served as the 'workbench' of countless musicians over the

centuries. In the process it has shaped the ways in which many historical musicians achieved their aspirations and went about meeting creative challenges. In recent decades interest has turned towards a contextualized understanding of creative processes in music, and keyboard studies appears well placed to contribute to the exploration of this wider concern. The nineteen essays collected here encompass the range of research in the field, bringing together contributions from performers, organologists and music historians. Questions relevant to issues of creative practice in various historical contexts, and of interpretative issues faced today, form a guiding thread. Its scope is wide-ranging, with contributions covering the mid-sixteenth to early

twentieth century. It is also inclusive, encompassing the diverse range of approaches to the field of contemporary keyboard studies. Collectively the essays form a survey of the ways in which the study of keyboard performance can enrich our understanding of musical life in a given period.

Evolution of Two-manual Stringed Keyboard Instrument Shuk Ki Wong 2021

Over the past few centuries, manufacturers have been modifying the design of keyboard instruments as a way to expand the instrument's capabilities; these modifications include the keyboard ranges, their dynamic levels, the pedals, the number of manuals, as well as electronic augmentations. The earliest record of double harpsichords can be found from the

last quarter of the 16th century, where the manuals were pitched a fourth apart to facilitate transposition. Later, in the 17th century, harpsichords with different numbers of registers and manuals were built - a few double-manual Italian harpsichords with two 8' registers and one 4' register were made from the middle of the 17th century. Harpsichords with richer and fuller sound were also built later in the 18th century, opening up a variety of possibilities for new repertoire. Later, the two-manual concept was adapted to the piano, and the Moór piano, as well as the hyperpiano, represent a culmination in the evolution of keyboard instruments. With the expansion of the keyboard's capabilities in the two-manual harpsichord, players were able to

play technically challenging passages in a close position, as well as give clarity to dynamic contrasts. Composers composed a number of works in response to these innovations, ranging from François Couperin's Pièces de clavecin, J.S. Bach's Clavier-Übung II and Goldberg Variations, to Ligeti's Continuum. This repertoire was written specifically for two-manual harpsichords and requires great technical command of the instrument. This project explores the history and the repertoire of double manual and other extended keyboard instruments, and examines the significance of using such instruments in selected musical examples. It also investigates repertoire that can be performed more effectively on a double manual keyboard instead of an

ordinary piano due to textural issues, overlapped passages, and other technical demands.

Heinrich Scheidemann's Keyboard Music Pieter Dirksen 2017-07-05 One of the most remarkable tales of recent resurrections in the field of early keyboard music concerns the music of Heinrich Scheidemann (c. 1595-1663). Long considered a minor master overshadowed by such figures as his

teacher Jan Pieterszoon Sweelinck or his fellow student Samuel Scheidt, a number of major source discoveries made in the second half of the twentieth century - the most important one being the discovery of the Zellerfield tablatures - have gradually raised his stature towards what it should now be, namely that of the paramount figure in North German organ music of the first half of the seventeenth century, equalled only by Buxtehude in the second half. Pieter Dirksen, one of the leading scholars on early German keyboard music, shows how Scheidemann was a central personality in the rich musical life of Hamburg and stood on friendly terms with colleagues such as Jacob and Johannes Praetorius, Ulrich Cernitz, Thomas Selle, Johann Schop and Johann Rist. The sources for

Scheidemann are for the most part contemporary and stem from all periods of his career, and beyond that until one or two decades after his death. His keyboard music was never published in his lifetime but circulated widely within professional circles. Dirksen considers the transmission of Scheidemann's music as a whole in Part One, where each source is analyzed individually, and the repertoire itself is examined in Part Two. A number of specialized studies, including a detailed investigation into the background of one of the sources as well as addressing questions of organology (an account of the famous Catharinen organ as it was during Scheidemann's era) and performance practice (a study of the fingering indications and observations on registration

practice) form Part Three. A wealth of appendices also detail a relative chronology of the music; a geographic overview of the transmission and two hitherto unpublished, fragmentarily transmitted Scheidemann pieces. The book will therefore a **Piano Manual** John Bishop 2009-07-15 Haynes manuals are now being published on a wide range of subjects, including musical instruments – and here comes coverage of one of the most popular and versatile instruments of all.
