The Making of the Oxford English Dictionary Peter Gilliver 2016-09-22 This book tells the history of the Oxford English Dictionary from its beginnings in the middle of the nineteenth century to the present. The author, uniquely among historians of the OED, is also a practising lexicographer with nearly thirty years' experience of working on the Dictionary. He has drawn on a wide range of sources-including previously unexamined archival material and eyewitness testimony-to create a detailed history of the project. The book explores the cultural background from which the idea of a comprehensive historical dictionary of English emerged, the lengthy struggles to bring this concept to fruition, and the development of the book from the appearance of the first printed fascicle in 1884 to the launching of the Dictionary as an online database in 2000 and beyond. It also examines the evolution of the lexicographers' working methods, and provides much information about the people-many of them remarkable individuals-who have contributed to the project over the last century and a half.

Paediatric Exercise Science and Medicine Neil Armstrong 2008-10-23 On publication the first edition of Paediatric Exercise Science and Medicine became the definitive text in the rapidly emerging discipline of paediatric exercise (including sport) science and medicine. Since the publication of the first edition, sport and exercise science and medicine has grown into one of the UK's major undergraduate subjects with 1,930 'sport' courses being offered at 151 institutions and UCAS receiving over 35,000 applications in 2005. Thishuge growth in undergraduate courses is now being reflected by an increase in taught masters programmes, research students, postdoctoral researchers, and university lecturers which, together with final year undergraduates, are the primary market for this text. The book is also aimed at the increasingnumber of human biology/physiology students and researchers, sports medicine physicians and students, paediatricians, paramedics, clinicians dealing with young athletes and advanced youth coaches. International interest in the children and exercise is reflected by a dramatic 123% increase in published research papers in the 10 years to 2007 compared with the 10 years to 2000 when the first edition was published (i.e. 4,377 compared with1,959).The first edition of Paediatric ExerciseScience and Medicine received excellent international reviews and was welcomed by reviewers as a coherent and comprehensive volume which offered 'state of the art' coverage of the topic. However, this material is now almost 10 years old and in a rapidly developing field requires updating andrefreshing. The second edition has retained the successful format of the first edition but has extended coverage to address recent research and new experimental techniques and methodologies which have provided further insights into understanding the exercising child. 'New' researchers who have become leaders in their field since the publication of the first edition have joined members of the original team of expert contributors who are still recognised as active leaders in their field toproduce a new edition which will be immediately recognised as the premier text covering children, sport and exercise.

Oxford Handbook of Practical Drug Therapy Duncan Richards 2011-11-10 Rev. ed. of: Oxford handbook of practical drug therapy / Duncan Richards, Jeffrey K. Aronson. 2005. **The Whole World in a Book** Sarah Ogilvie 2019-11-01 Nineteenth-century readers had an appetite for books so big they seemed to contain the whole world: immense novels, series of novels, encyclopaedias. Especially in Eurasia and North America, especially among the middle and upper classes, people had the space, time, and energy for very long books. More than other multi-volume nineteenth-century collections, the dictionaries, or their descendants of the same name, remain with us in the twenty-first century. Online or on paper, people still consult Oxford for British English, Webster for American, Grimm for German, Littré for French, Dahl for Russian. Even in spaces whose literary languages already had long philological and lexicographic traditions-Chinese, Japanese, Arabic, Persian, Greek, Latin-the burgeoning imperialisms and nationalisms of the nineteenth century generated new dictionaries. The Whole World in a Book explores a period in which globalization, industrialization, and social mobility were changing language in unimaginable ways. Newly automated technologies and systems of communication expanded the international reach of dictionaries, while rising literacy rates, book consumption, and advertising led to their unprecedented popularization. Dictionaries in the nineteenth century became more than dictionaries: they were battlefields between prestige languages and lower-status dialects; national icons celebrating the language and literature of the nation-state; and sites of innovative authorship where middle and lower classes, volunteers, women, colonial subjects, the deaf, and missionaries joined the ranks of educated white men in defining how people communicated and understood the world around them. In this volume, eighteen of the world's leading scholars investigate these lexicographers asking how the world within which they lived supported their projects? What did language itself mean for them? What goals did they try to accomplish in their dictionaries?

Handbook of Disability Sport and Exercise Psychology Jeffrey J. Martin 2017-10-26 Historically, very few sport and exercise psychologists and professionals from related fields such as disability and rehabilitation have conducted thorough research on individuals with disabilities engaged in sport and exercise. The tide is turning, however, as growing media attention and familiarity with the Paralympics and the Wounded Warrior Project begins capturing the attention of researchers everywhere. By addressing this gap, Jeffrey J. Martin's compelling Handbook of Disability Sport and Exercise Psychology is one of the first comprehensive overviews of this important and emerging field of study. In this volume, Martin, an accomplished professor of sport and exercise psychology, shines a light on a variety of topics ranging from philosophy, athletic identity, participation motivation, quality of life, social and environmental barriers, body image, and intellectual impairments among many other issues. Based on the author's own experience and insight, a majority of these topic discussions in this volume are accompanied by thoughtful directions for future research and exploration. Designed to spark conversation and initiate new avenues of research, the Handbook of Disability Sport and Exercise Psychology will allow for readers to look outside the traditional literature focusing largely on able-bodied individuals and, instead, develop a much greater perspective on sport and exercise psychology today.
