Titanic Don Lynch 1992 The story of the Titanic has mesmerized the world, and Titanic: An Illustrated History brings to life in full color and vivid detail the tragic story of the great ocean liner. It features the paintings of renowned Titanic artist Ken Marschall, which inspired director James Cameron to create the epic film -- winner of 11 Academy Awards, including Best Picture and Best Director.

The Myth of the Titanic R. Howells 1999-03-29 The first critical analysis of the Titanic as modern myth, this book focuses on the second of the two Titans . The first was the physical Titanic , the rusting remains of which can still be found twelve thousand feet below the north Atlantic. The second is the mythical Titanic which emerged just as its tangible predecessor slipped from view on 15 April 1912. It is the second of the two Titans which remains the more interesting and which continues to carry cultural resonances today. The Myth of the Titanic begins with the launching of the 'unsinkable ship' and ends with the outbreak of the 'war to end all wars'. It provides an insight into the particular culture of late-Edwardian Britain and beyond this draws far greater conclusions about the complex relationship between myth, history, popular culture and society as a whole.

A Historical Review and Analysis of Army Physical Readiness Training and Assessment Whitfield East 2013-12 "The Drillmaster of Valley Forge- Baron Von Steuben-correctly noted in his "Blue Book" how physical conditioning and health (which he found woefully missing when he joined Washington's camp) would always be directly linked to individual and unit discipline, courage in the fight, and victory on the battlefield. That remains true today. Even an amateur historian, choosing any study on the performance of units in combat, quickly discovers how the levels of conditioning and physical performance of Soldiers is directly proportional to success or failure in the field. In this monograph, Dr. Whitfield "Chip" East provides a pragmatic history of physical readiness training in our Army. He tells us we initially mirrored the professional Armies of Europe as they prepared their forces for war on the continent. Then he introduces us to some master trainers, and shows us how they initiated an American brand of physical conditioning when our forces were found lacking in the early wars of the last century. Finally, he shows us how we have and must incorporate science (even when there exists considerable debate!) to contribute to what we do-and how we do it-in shaping today's Army. Dr. East provides the history, the analysis, and the pragmatism, and all of it is geared to understanding how our Army has and must train Soldiers for the physical demands of combat. Our culture is becoming increasingly "unfit," due to poor nutrition, a lack of adequate and formal exercise, and too much technology. Still, the Soldiers who come to our Army from our society will be asked to fight in increasingly complex and demanding conflicts, and they must be prepared through new, unique, and scientifically based techniques. So while Dr. East's monograph is a fascinating history, it is also a required call for all leaders to better understand the science and the art of physical preparation for the battlefield. It was and is important for us to get this area of training right, because getting it right means a better chance for success in combat. **The Battleship Bismarck** Stefan Draminski 2018-09-20 The Bismarck is perhaps the most famous - and notorious - warship ever built. Completed in 1941, the 45,000-ton German battleship sank HMS Hood, the pride of the British Navy, during one of the most sensational encounters in naval history. Following the sinking, Bismarck was chased around the North Atlantic by many units of the Royal Navy. She was finally dispatched with gunfire and torpedoes on 27 May, less than five months after her completion. Her wreck still lies where she sank, 4,800m down and 960km off the west coast of France. Drawing on new research and technology, this edition is the most comprehensive examination of Bismarck ever published. It includes a complete set of detailed line drawings with fully descriptive keys and full-colour 3D artwork, supported by technical details, photographs and text on the building of the ship and a record of the ship's service history.

Trademarks on Base-metal Tableware Eileen Woodhead 1991 Over the past decade the Metal Unit of the Material Culture Section, Archaeology Research Division, Canadian Parks Service, has maintained a reference file identifying marks found on metal artifacts. This document is a selection of marks on file that relate primarily to tableware items, from the late 18th century to about 1900.

The Invention of International Crime P. Knepper 2009-10-29 We live in the age of international crime but when did it begin? This book examines the period when crime became an international issue (1881-1914), exploring issues such as 'world-shrinking' changes in transportation, communication and commerce, and concerns about alien criminality, white slave trading and anarchist outrages.

Curriculum Wesley Null 2016-12-13 This updated second edition of Curriculum: From Theory to Practice provides an introduction to curriculum theory and how it relates to classroom practice. Wesley Null builds upon recent developments while at the same time continuing to provide a unique organization of the curriculum field into five traditions: systematic, existential, radical, pragmatic, and deliberative. Null discusses the philosophical foundations of curriculum as well as historical and contemporary figures who have shaped each curriculum tradition. To ensure breadth and scope, Null has expanded this second edition to include figures not present in the first. Additionally, after a chapter on each of the five perspectives, Null presents case studies that describe realistic and specific curriculum problems that commonly arise within educational institutions at all levels. Scholars and practitioners alike are given opportunities to practice resolving curriculum problems through deliberation. Each case study focuses on a critical issue such as the implementation of curriculum standards, the attempt to reform core curriculum within universities, and the complex practice of curriculum making. In the final chapter, Null offers a vision for the curriculum field that connects curriculum deliberation with recent developments in moral philosophy.

The Story of Gamma Phi Beta Lindsey Barbee 1921 **RMS Olympic** Mark Chirmside 2015-09-07 Sitting around a dining-room table in 1907, the owners of the White Star Line discussed their competition to the newly-built Cunard liners, Lusitania and Mauretania. From that smoke-filled room came the first designs of three White Star superliners. Olympic and Titanic were to be built at Harland & Wolff's yard in Belfast, while the third ship was to follow after construction had been completed on the first pair of sisters. The only ship to make a return passenger voyage was Olympic and she was always overshadowed by her younger sisters. This is the definitive story of Titanic's sister RMS Olympic. First published in 2004 to critical acclaim, this new edition presents a revised expanded work from one the most successful maritime authors at work in Britain today.

Media,Technology and Society Brian Winston 2002-09-11 Challenging the popular myth of a present-day 'information revolution', Media Technology and Society is essential reading for anyone interested in the social impact of technological change. Winston argues that the development of new media forms, from the telegraph and the telephone to computers, satellite and virtual reality, is the product of a constant play-off between social necessity and suppression: the unwritten law by which new technologies are introduced into society only insofar as their disruptive potential is limited.

RMS Mauretania (1907) David Hutchings 2019-12-02 FIVE YEARS in the making, RMS Mauretania and her sister the Lusitania represented a new era in British shipbuilding. Ostensibly built to compete against record-breaking German behemoths, the Mauretania was not only one of the first major ships to be turbine-driven or have four propellers - she was the largest moving structure ever to have been created by man at that time. And, soon enough, she would become the fastest as well.But the Mauretania wasn't just built for luxury. When war was declared in August 1914, she was pressed into service as a troop- and hospital ship. Where once she had carried society ladies, she now carried soldiers.Intensely researched and with over 100 photographs and illustrations, RMS Mauretania (1907): Queen of the Seas is the definitive book on this most remarkable liner.

The South Pole Roald Amundsen 2001 Roals Amundsen (1872-1928), the foremost polar explorer, records his race to be the first man to reach the South Pole.

The Titanic Story David Hutchings 2008 When the White Star Line's "unsinkable" transatlantic liner RMS Titanic struck an iceberg on her maiden voyage from Southampton to New York on April 15, 1912, she sank with the loss of 1,503 lives; 705 survived the disaster. From that fateful day when the pride of the British merchant marine plumbed the icy depths of the North Atlantic, Titanic has become the most celebrated of maritime disasters and has spanned hundreds of books and two major films.

The Rest Is Noise Alex Ross 2007-10-16 Winner of the 2007 National Book Critics Circle Award for Criticism A New York Times Book Review Top Ten Book of the Year Time magazine Top Ten Nonfiction Book of 2007 Newsweek Favorite Books of 2007 A Washington Post Book World Best Book of 2007 In this sweeping and dramatic narrative, Alex Ross, music critic for The New Yorker, weaves together the histories of the twentieth century and its music, from Vienna before the First World War to Paris in the twenties; from Hitler's Germany and Stalin's Russia to downtown New York in the sixties and seventies up to the present. Taking readers into the labyrinth of modern style, Ross draws revelatory connections between the century's most influential composers and the wider culture. The Rest Is Noise is an astonishing history of the twentieth century as told through its music.

T is for Titanic Michael Shoulders 2011-12-01 In T is for Titanic, husband-and-wife writing team Michael and Debbie Shoulders sift through the stories, documents, and artifacts surrounding the famous ship, giving a you-are-there view to one of the greatest disaster stories.

Kipling: Poems Rudyard Kipling 2013-10-23 Beloved for his fanciful and engrossing children's literature, controversial for his enthusiasm for British imperialism, Rudyard Kipling remains one of the most widely read writers of Victorian and modern English literature. In addition to writing more than two dozen works of fiction, including Kim and The Jungle Book, Kipling was a prolific poet, composing verse in every classical form from the epigram to the ode. Kipling's most distinctive gift was for ballads and narrative poems in which he drew vivid characters in universal situations, articulating profound truths in plain language. Yet he was also a subtle, affecting anatomist of the human heart, and his deep feeling for the natural world was exquisitely expressed in his verse. He was shattered by World War I, in which he lost his only son, and his work darkened in later years but never lost its extraordinary vitality. All of these aspects of Kipling's poetry are represented in this selection, which ranges from such well-known compositions as "Mandalay" and "If" to the less-familiar, emotionally powerful, and personal epigrams he wrote in response to the war.

Let there be Science Tom McLeish 2017-01-20 Why is it that science has consistently thrived wherever the Christian faith can be found? Why is it that so many great scientists - past and present - attribute their motivation and their discoveries, at least partially, to their Christian beliefs? Why are the age-old writings of the Bible so full of questions about natural phenomena? And, perhaps most importantly of all, why is all this virtually unknown to the general public? Too often, it would seem, science has been presented to the outside world as a robotic, detached, unemotional enterprise. Too often, Christianity is dismissed as being an ancient superstition. In reality, neither is the case. Science is a deeply human activity, and Christianity is deeply reasonable. Perhaps this is why, from ancient times right up to today, many individuals have been profoundly committed to both - and have helped us to understand more and more about the extraordinary world that we live in. As authors Tom McLeish and David Hutchings examine the story of science, and look at the part that Christianity has played, they uncover a powerful underlying reason for doing science in the first place. In example after example, ranging from 4000 BC to the present day, they show that thinking with a Christian worldview has been intimately involved with, and sometimes even directly responsible for, some of the biggest leaps forward ever made. Ultimately, they portray a biblical God who loves Science - and a Science that truly needs God.

Ship Design Apostolos Papanikolaou 2014-09-16 This book deals with ship design and in particular with methodologies of the preliminary design of ships. The book is complemented by a basic bibliography and five appendices with useful updated charts for the selection of the main dimensions and other basic characteristics of different types of ships (Appendix A), the determination of hull form from the data of systematic hull form series (Appendix B), the detailed description of the relational method for the preliminary estimation of ship weights (Appendix C), a brief review of the historical evolution of shipbuilding science and technology from the prehistoric era to date (Appendix D) and finally a historical review of regulatory developments of ship's damage stability to date (Appendix E). The book can be used as textbook for ship design courses or as additional reading for university or college students of naval architecture courses and related disciplines; it may also serve as a reference book for naval architects, practicing engineers of related disciplines and ship officers, who like to enter the ship design field systematically or to use practical methodologies for the estimation of ship's main dimensions and of other ship main properties and elements of ship design.

Battleship Bismarck William H. Garzke 2019-06 This new book on Bismarck offers a forensic analysis of the design, operation and loss of Germany's greatest battleship and draws on survivors accounts and the authors' combined decades of experience in naval architecture and command at sea. Their investigation into every aspect of this battleship has taken fifty-six years of painstaking research, during which time they conducted extensive interviews and corresponded with the ship's designers and the survivors of the battle of the Denmark Strait and Bismarck's final battle. Albert Schnarke, for instance, the

former gunnery officer of Tirpitz, Bismarck's sister ship, aided the authors greatly by translating and supplying manuscript materials from those who had participated in the design and operations. Survivors of Bismarck's engagements contributed to this comprehensive study including D B H Wildish, RN, damage control officer aboard HMS Prince of Wales, who located photographs of battle damage to his ship. After the wreck of Bismarck was discovered in June 1989, the authors served as technical consultants to Dr Robert Ballard, who led three trips to the site. Film maker and explorer James Cameron has contributed a chapter, which gives the reader a comprehensive overview of his deep-sea explorations on Bismarck and it is illustrated with his team's remarkable photographs of the wreck. The result of nearly six decades of research and collaboration, this new work is an engrossing and encyclopaedic account of the events surrounding one of the most epic naval battles of World War Two. And Battleship Bismarck finally resolves some of the major questions around her career, not least the most profound one of all: Who sank the Bismarck, the British or the Germans? AUTHORS: William H. Garzke is a graduate of the of the University of Michigan with a degree in naval architecture and marine engineering. Robert O. Dulin is a graduate of the US Naval Academy and later earned his MS in naval architecture and marine engineering from MIT. William J. Jurens currently serves as an associate editor for Warship International. James Cameron is a Canadian film maker and deep-sea explorer.

Titanic in Photographs Daniel Klistorner 2014-04-01 The name Titanic has become synonymous with catastrophe, the story of this luxurious liner legendary. Wrecked after colliding with an iceberg on her maiden voyage, the loss of around 1,500 lives among her passengers and crew has gone down in history as one of the most motive and tragic disasters in history. In this evocative collection of photographs the full story of Titanic is told, set against the backdrop of the great race to build the biggest and best passenger liner. From her genesis in the shipyard of Harland & Wolff to the anticipation of her launch and through her fitting out and sea trials, the excitement of Titanic's maiden voyage is keenly evident in the many rare and unusual images in this book. Looking at her departure from Southampton and her stops at Cherbourg and Queenstown, and including many photos never before published, this book follows the story to its tragic conclusion, the role of Carpathia and the aftermath of this shattering disaster.

RMS Titanic Peter Davies-Garner 2005-07-30 RMS Titanic has had more written about her than any other ship but, surprisingly, there is little information directed at the modelmaker. This superb book contains all the information needed to build a highly accurate model, down to the tiniest details of the hull's rivets. The work is based on the author's remarkable 18ft model, built to 1/48 scale, and specially commissioned for a travelling exhibition in North America. The book contains a mass of practical information on how to construct every part of the great liner and is equally applicable to a small static bread-and-butter display model as to a large working version.Profusely illustrated with close-up photographs, detailed drawings and a large collection of photographs of the prototype herself, the book also contains a complete set of plans considered to be the most accurate yet drawn.With this mix of practical information, rare photographs and highly detailed drawings the book can appeal to all Titanic enthusiasts as well as to ship modellers of every sort.

Of Popes and Unicorns David Hutchings 2021 Of Popes and Unicorns shares the story of John Draper and Andrew White who, in the late 19th century, published books falsely claiming a toxic history between religion and science. This book examines the implications of Draper and White's conspiracy and debunks the conflict thesis once and for all.

RMS Titanic Manual David Hutchings 2016-11-15 The world famous ocean liner Titanic, which sank on her maiden voyage in 1912, is the latest subject to receive the Haynes Manual treatment. With an authoritative text and hundreds of illustrations, see how this leviathan was built, launched, and fitted out. Read about her lavish passenger accommodation. Learn about the captain's responsibilities, including the operation of a transatlantic liner. Consider the chief engineer's view - how did he manage the huge engines and other onboard systems? What was it like to operate the luxury ocean liner from the perspective of Titanic's owner, the White Star line?

Titanic Bruce Beveridge 2008 While everyone knows the new White Star liner was the most glamorous and was full of millionaires when she sank, few appreciate just how luxurious she was. Even in Third Class, the accommodation was better than on First Class on many older ships. For thefirst time, Bruce Beveridge, Steve Hall and Scott Andrews look at the ship itself, and at her interior design and fittings. From cobalt blue Spode china and Elkington plate silverware in the a la carte restaurant to the design of the boilers and fixturesand fittings onboard the world's most luxurious vessel, they tell the story of a liner built at the peak of the race between the British, French and Germans to build bigger and better ships. --from publisher description *Harmsworth Magazine* 1900

God, Stephen Hawking and the Multiverse David Hutchings 2020-01-16 'An astonishingly good read, gripping and thought-provoking' - William Lane Craig 'If you wanted to understand Stephen Hawking but couldn't face the maths, this is the book for you.' - Dr Althea Wilkinson, Jodrell Bank Stephen Hawking kept breaking rules. Given two years to live, he managed another 54. He wrote about quantum cosmology - and sold 20 million books. He could not speak, yet the world recognized his voice. Hutchings and Wilkinson shine light on his extraordinary ideas. The result is a story of black holes, origins, many universes, and Big Questions. 'Remarkable.' - Professor Christine Done, Durham University 'Highly recommended.' - Dr Luke Barnes, author, The Cosmic Revolutionary's Handbook 'A warm and well-balanced portrait of Stephen Hawking and his seminal contributions to our understanding of the universe.' - Professor Reed A. The Ship of Dreams Gareth Russell 2020-11-03 This original and "meticulously researched retelling of history's most infamous voyage" (Denise Kiernan, New York Times bestselling author) uses the sinking of the Titanic as a prism through which to examine the end of the Edwardian era and the seismic shift modernity brought to the Western world. "While there are many Titanic books, this is one readers will consider a favorite" (Voyage). In April 1912, six notable people were among those privileged to experience the height of luxury—first class passage on “the ship of dreams,” the RMS Titanic: Lucy Leslie, Countess of Rothes; son of the British Empire Tommy Andrews; American captain of industry John Thayer and his son Jack; Jewish-American immigrant Ida Straus; and American model and movie star Dorothy Gibson. Within a week of setting sail, they were all caught up in the horrifying disaster of the Titanic's sinking, one of the biggest news stories of the century. Today, we can see their stories and the Titanic's voyage as the beginning of the end of the established hierarchy of the Edwardian era. Writing in his signature elegant prose and using previously unpublished sources, deck plans, journal entries, and surviving artifacts, Gareth Russell peers through the portholes of these first-class travelers to immerse us in a time of unprecedented change in British and American history. Through their intertwining lives, he examines social, technological, political, and economic forces such as the nuances of the British class system, the explosion of competition in the shipping trade, the birth of the movie industry, the Irish Home Rule Crisis, and the Jewish-American immigrant experience while also recounting their intimate stories of bravery, tragedy, and selflessness. Lavishly illustrated with color and black and white photographs, this is “a beautiful requiem” (The Wall Street Journal) in which “readers get the story of this particular floating Tower of Babel in riveting detail, and with all the wider context they could want” (Christian Science Monitor).

Subjectivism and Interpretative Methodology in Theory and Practice Fu-Lai Tony Yu 2020-02-15 “Subjectivism and Interpretative Methodology in Theory and Practice” uses the subjectivist approach originated in Max Weber's interpretation method, Alfred Schütz's phenomenology, and Peter Berger and Thomas Luckmann's sociology of knowledge to understand economic and social phenomena. This method brings human agency back into the forefront of analysis, adding new insights not only in economics and management, but also in sociology, politics, psychology and organizational behavior.

Titanic and Her Sisters Olympic and Britannic Peter Davies-Garner 2011-07-30 The ShipCraft series explores the iconic pleasure vessels Titanic, Olympic, and Britannic in fully illustrated detail for building your own model ship. In the first of the ShipCraft series to cover non-naval vessels, this meticulously researched and illustrated volume looks at the legendary cruise ship RMS Titanic and her sisters, Olympic and Britannic. Written for the serious model ship builder, this book not only covers the many model kits available, but a concise history of the ship's class, including every detail that contributed to the ship's creation. Accompanied by hundreds of photographs of models in various scales, the text covers paint colors, line drawings, and scale plans, as well as the differences in the ships' appearance over time. An invaluable resource on available models, their pros and cons, and ways to modify and customize each one, this ShipCraft title concludes with a reference section essential to any modeler.

The Sinking of the Titanic and Great Sea Disasters Logan Marshall 2012-08-07 This is one of the first and most famous books published after the sinking of the Titanic, and contains much material from contemporary newspaper accounts. It was written by Logan Howard-Smith (under the pen name of Logan Marshall), an editor who specialized in the rapid publication of books about current events. For this book, his crowning achievement, the initial print run was for no fewer than 110,000 copies. The publisher achieved this by running 11 presses simultaneously, and the books were then sold door-to-door across America for a dollar apiece. Although Marshall's own description of the sinking is melodramatic and sensationalistic, the many verbatim interviews with survivors of the disaster have stood the test of time, and are often cited in Titanic literature.
