Ruch 2003-08-11

Winner of the 2002 Alice L. Beeman Research Award for Outstanding Writing about Communications from the Council for Advancement and Support of Education Among higher education institutions in the United States, for-profit colleges and universities have steadily captured a larger share of the student market. A recent trend at for-profit institutions is the coupling of job training with accredited academic programs that offer traditional baccalaureate, professional, and graduate degrees. Richard Ruch, with administrative experience in both the nonprofit and for-profit sectors of higher education, takes us inside these new for-profit institutions, describing who teaches there, who enrolls and why, and how the for-profits are managed and by whom. He analyzes their different structures, services, and outlook on higher learning and training, and explains in detail how they make profits from tuition income. In *Higher Ed, Inc.*, Ruch opens up the discussion about for-profit higher education from the perspective of a participant-observer. Focusing on five providers—the Apollo Group (the University of Phoenix); Argosy Education Group (the American Schools of Professional Psychology); DeVry, Inc. (DeVry Institutes of Technology); Education Management Corporation (the Art Institutes International); and Strayer Education (Strayer University)—he conveys for the first time what it feels like to be inside this new kind of American institution. He is also candid about the less attractive aspects of the for-profit colleges, including what those who enroll may give up. As Ruch makes clear, the major for-profit colleges and universities offer a different approach to higher education—one that may be increasingly influential in the future.

Program Management Develop strategies, programs, and candidate projects into a strategic portfolio Align strategies and programs to ensure success, profitability, and program benefits Assess, monitor, and mitigate risk on a program scale Hone global program management leadership competencies Find and secure partners to provide program support Apply program management concepts to federal sector reforms **A Parallel Postsecondary Universe** - Clifford Adelman 2000

This report describes a new system of credentialing that has arisen in the information technology and telecommunications industries over the past decade. It compares this system to traditional higher education, identifying both similarities and dissimilarities, and points to some cases in which the two interact.... The summary section of this report emphasizes the major themes of the certification system and its relationship to higher education: 1. The system is global and operates in many languages. 2. The student, not the institution, is at the center of the system. 3. The system has brought competency-based education and performance assessment to a status they have never enjoyed within traditional higher education. 4. Certification replace neither experience nor degrees, and the IT system does not pretend to be higher education. the summary also indicates the critical need for more information on certification candidates and providers of course work, since the new system is now large enough to play a role in state and national planning for postsecondary education. Creating the Council for Higher Education Accreditation (CHEA) - Harland G. Bloland 2001

Accreditation at our nation's institutions of higher education has undergone dramatic changes in the past decade. Harland G. Bloland was an insider during the establishment of a new organization, the Council for Higher Education Accreditation (CHEA). This book chronicles his unique experiences with the players, processes, and history involved in CHEA's creation. Harland G. Bloland, in this new title from the American Council on Education (ACE)/Oryx Press Series on Higher Education, chronicles his rare, insider experiences with the players, processes, and history involved in creating the Council for Higher Education Accreditation (CHEA). Bloland was present at the meetings of the National Policy Board and the Presidents Work Group as they set the parameters for the creation of CHEA, the crucial entity that recognizes

accrediting agencies for colleges and universities across the United States. Reviewing the past accrediting oversight of FRACHE, NCA, COPA, and CORPA, and then following the progress of CHEA through its first year and attending its board meetings, Bloland has constructed a unique, complete history of the accrediting process. Institution and organization creation theory, borrowed from the field of sociology, provided the basis for his research. His analysis concerning the obstacles and possibilities confronted by a new organization helps to characterize CHEA and previous accrediting organizations, and to answer the following questions: BL What is accreditation and why is it important? BL What is the social and political context within which CHEA was developed? BL What occurred in the process of creating CHEA? BL What roles do accreditation and CHEA play in American higher education? BL What were the issues that CHEA and accreditation faced in its infancy? BL What is the current state of CHEA and accreditation?

Top-Down Network Design - Priscilla Oppenheimer 2010-08-24
Objectives The purpose of Top-Down Network Design, Third Edition, is to help you design networks that meet a customer's business and technical goals. Whether your customer is another department within your own company or an external client, this book provides you with tested processes and tools to help you understand traffic flow, protocol behavior, and internetworking technologies. After completing this book, you will be equipped to design enterprise networks that meet a customer's requirements for functionality, capacity, performance, availability, scalability, affordability, security, and manageability. Audience This book is for you if you are an internetworking professional responsible for designing and maintaining medium- to large-sized enterprise networks. If you are a network engineer, architect, or technician who has a working knowledge of network protocols and technologies, this book will provide you with practical advice on applying your knowledge to internetwork design. This book also includes useful information for consultants, systems engineers, and sales engineers who design corporate networks for clients. In the fast-paced presales environment of many systems engineers, it often is difficult to slow down and insist on a top-down, structured systems analysis approach. Wherever possible, this book includes shortcuts and assumptions that can be made to speed up the network design process. Finally, this book is useful for undergraduate and graduate students in computer science and information technology disciplines. Students who have taken one or two courses in networking theory will find Top-Down Network Design, Third Edition, an approachable introduction to the engineering and business issues related to developing real-world networks that solve typical business problems. Changes for the Third Edition Networks have changed in many ways since the second edition was published. Many legacy technologies have disappeared and are no longer covered in the book. In addition, modern networks have become multifaceted, providing support for numerous bandwidth-hungry applications and a variety of devices, ranging from smart phones to tablet PCs to high-end servers. Modern users expect the network to be available all the time, from any device, and to let them securely collaborate with coworkers, friends, and family. Networks today support voice, video, high-definition TV, desktop sharing, virtual meetings, online training, virtual reality, and applications that we can't even imagine that brilliant college students are busily creating in their dorm rooms. As applications rapidly change and put more demand on networks, the need to teach a systematic approach to network design is even more important than ever. With that need in mind, the third edition has been retooled to make it an ideal textbook for college students. The third edition features review questions and design scenarios at the end of each chapter to help students learn top-down network design. To address new demands on modern networks, the third edition of Top-Down Network Design also has updated material on the following topics: • Network redundancy • Modularity in network designs • The Cisco SAFE security reference architecture • The Rapid Spanning Tree Protocol (RSTP) • Internet Protocol version 6 (IPv6) • Ethernet scalability options, including 10-Gbps Ethernet and Metro Ethernet • Network design and management tools

Creating Sustainable Work Systems - Peter Docherty 2008-10-30

Since the first edition of this book was published, the subject of sustainability has risen to the forefront of thinking in almost every subject within business and management. Tackling the latest developments and integrating practical perspectives with rigorous research, this new edition sheds light on a vital aspect of working life. Current trends reveal that increasing intensity at work has major consequences at individual, organizational and societal levels. Sustainability in work systems thus requires a multi-stakeholder approach, emphasizing a value-based choice to promote the concurrent development of various resources in the work system. This sustainability grows from intertwined individual and collective learning processes taking place within and between organizations in collaboration. In exploring the development of sustainable work systems, this book analyzes these problems, and provides the basis for designing and implementing 'sustainable work systems' based on the idea of regeneration and the development of human and social resources. The authors, who are leading researchers and practitioners from around the world, consider the existing possibilities and emerging solutions and explore alternatives to intensive work systems.
