## **Fang and Claw** - Markie Madden 2015-10-04

Over a hundred years in the future, it's a world where supernatural beings live and work among humans. Of course, the government has forced them to take the Undead Oath in order to gain citizenship; they must not prey on humans for food. They're often given tasks in jobs suited for their species, but just as among other minorities, they must struggle to prove themselves. As if dealing with racial prejudice isn't enough, there is also a criminal element, just as there is with any group of beings living in society. The Dallas Police Department has introduced an elite new squad made up of Undead officers and detectives. This unit is dedicated to solving crimes involving Immortals. Headed by veteran detective Lacey Anderson, can the Undead Unit overcome its obstacles, both internal and external, or will it be doomed to failure? Lieutenant Lacey Anderson of the Dallas Police Department heads up a new elite squad dedicated to solving crimes involving Immortal species like herself. Lacey, a Vampire left for dead hundreds of years ago when her family was slaughtered by Werewolves, still has nightmares about the grievous ordeal. Detective Colton Scarber is her unwilling partner and second-in-command of the unit. He's a Werewolf, a descendant of those who killed Lacey's family. She doesn't know this, but she still doesn't trust him from the start. When the fragile beginning of the team is

threatened by the truth, can they learn to trust one another as partners must, or will the Undead Unit be doomed to failure? A mysterious suspect and strange, unknown physical evidence leads them to solve a case spanning decades, and leaves Lacey with no other choice but to rely on her enemy when her very life is in danger!

[Porsche 928, 924, 944 and 968](#) - Marc Cranswick 2016-03-28

Porsche AG, today the most profitable car company in the world, was in 1975 a small but headstrong German automaker on the verge of its most significant development. New national laws were changing the way manufacturers designed their products, but the auto consumer was also

craving more exciting and innovative design. That innovation came in 1975 with the release of the revolutionary Porsche 924. This book begins its analysis with the creation of the Porsche 924 and the impact it made on the automotive world. During the 1980s, Porsche honed earlier 924 designs to create the 944 and its Turbo and convertible variants, and later the 968, completing a line that has produced some of the most respected sports cars of the modern era. The text also follows in detail the long production life and development of Porsche's V-8 powered high performance grand tourer, the 928—introduced in 1977, named the 1978 European Car of the Year and culminating in the 350 bhp 928 GTS of the 1990s. This history of the dynamic Porsche family gives a full account of each model and reveals the unique contributions each has made to a constantly evolving automotive world.

Increasing seat belt use is one of the most effective and least costly ways of reducing the lives lost and injuries incurred on the nation's highways each year, yet about one in four drivers and front-seat passengers continues to ride unbuckled. The Transportation Research Board, in response to a congressional request for a study to examine the potential of in-vehicle technologies to increase belt use, formed a panel of 12 experts having expertise in the areas of automotive engineering, design, and regulation; traffic safety and injury prevention; human factors; survey research methods; economics; and technology education and consumer interest. This panel, named the Committee for the Safety Belt

Technology Study, examined the potential benefits of technologies designed to increase belt use, determined how drivers view the acceptability of the technologies, and considered whether legislative or regulatory actions are necessary to enable their installation on passenger vehicles. The National Highway Traffic Safety Administration (NHTSA), the study sponsor, funded and conducted interviews and focus groups of samples of different belt user groups to learn more about the potential effectiveness and acceptability of technologies ranging from seat belt reminder systems to more aggressive interlock systems, and provided the information collected to the study committee. The committee also supplemented its expertise by holding its second meeting in Dearborn, Michigan, where it met in proprietary sessions with several of the major automobile manufacturers, a key supplier, and a small business inventor of a shifter interlock system to learn of planned new seat belt use technologies as well as about company data concerning their effectiveness and acceptability. The committee's findings and recommendations are presented in this five-chapter report.
