[Bobcat Fifty Years](#) - Marty Padgett 2007

Marking the 50th anniversary of an icon of American industry, this book celebrates a half-century of Bobcat with brilliant images of these quintessentially American machines at work, including historical photographs and

diagrams, alongside the full story of the only compact machines that have ever mattered. Often imitated but never equaled, the Bobcat skid-steer loader was born when some hardy souls in the Northern Plains needed a new way to get work done. The pictures in these pages show how the Bobcat loader has been moving American industry ever since, joined over the years by Bobcat excavators and trenchers, utility trucks and more. Bobcat Fifty Years chronicles the changes and innovations that have kept the company at the forefront of the nation's compact machinery makers--from the invention of the Bob-Tach quick-change attachment system to the introduction of the Big Bob, the Mini-Bob, and the M-700, the first hydrostatic loader of its size. Here, again and again, is evidence of why Fortune Magazine named the Bobcat one of "America's best"--one of the 100 American-made products that represent the best of their kind, anywhere in the world.

The Worm Farmer's Handbook
- Rhonda Sherman 2018-11-08
Choice Reviews, Outstanding Academic Title Techniques and systems for processing food scraps, manure, yard debris, paper, and more Turning waste into wealth sounds too good to be true, but many worm farmers are finding that vermicomposting is a reliable way to do just that.

Vermicast—a biologically active, nutrient-rich mix of earthworm castings and decomposed organic matter—sells for \$400 or more per cubic yard. Compare that to regular compost, sold at about \$30 a cubic yard, and you'll see why vermicomposting has taken root in most countries and on every continent but Antarctica.

Vermicomposting is also one of the best sustainable solutions for organic waste management. Vermicomposting manure and crop wastes on farms improves crop yields while reducing demand for off-farm inputs. Vermicast has higher nutrient levels and lower soluble salt content than regular compost, and it improves soil aeration, porosity, and water retention. Plus, vermicast suppresses plant diseases and insect attacks. Municipalities, businesses, community gardens, schools, and universities can set up vermicomposting operations to process food residuals and other waste materials. The Worm Farmer's Handbook details the ins and outs of vermicomposting for mid- to large-scale operations, including how to recycle organic materials ranging from food wastes and yard trimmings to manure and shredded office paper. Vermicomposting expert Rhonda Sherman shares what she has learned over twenty-five years working with

commercial worm growers and researchers around the world. Her profiles of successful worm growers across the United States and from New Zealand to the Middle East and Europe describe their proven methods and systems. This book digs into all the details, including: Choosing the right production system Regulatory issues and developing a business and marketing plan Finding and managing feedstocks Pre-composting: why and how to do it Monitoring an active worm bed Harvesting, screening, testing, packaging, and storing vermicast Markets for earthworms and vermicast Food security: how vermicast benefits soils and plants Keys to success: avoiding common pitfalls From livestock farms and restaurants to colleges, military bases, and prisons, Sherman details why and how commercial-scale vermicomposting is a fast-growing, sustainable solution for organic waste management. The Worm Farmer's Handbook is the first and only authoritative how-to guide that

goes beyond small-scale operations and demystifies the science and logistics of the fascinating process that is vermicomposting.

Farming While Black - Leah Penniman 2018-10-30
James Beard Foundation Leadership Award 2019: Leah Penniman Choice Reviews, Outstanding Academic Title
"An extraordinary book...part agricultural guide, part revolutionary manifesto"--
VOGUE In 1920, 14 percent of all land-owning US farmers were black. Today less than 2 percent of farms are controlled by black people—a loss of over 14 million acres and the result of discrimination and dispossession. While farm management is among the whitest of professions, farm labor is predominantly brown and exploited, and people of color disproportionately live in “food apartheid” neighborhoods and suffer from diet-related illness. The system is built on stolen land and stolen labor and needs a redesign. *Farming While Black* is the first comprehensive “how to” guide for aspiring African-heritage growers to reclaim

their dignity as agriculturists and for all farmers to understand the distinct, technical contributions of African-heritage people to sustainable agriculture. At Soul Fire Farm, author Leah Penniman co-created the Black and Latinx Farmers Immersion (BLFI) program as a container for new farmers to share growing skills in a culturally relevant and supportive environment led by people of color. *Farming While Black* organizes and expands upon the curriculum of the BLFI to provide readers with a concise guide to all aspects of small-scale farming, from business planning to preserving the harvest. Throughout the chapters Penniman uplifts the wisdom of the African diasporic farmers and activists whose work informs the techniques described—from whole farm planning, soil fertility, seed selection, and agroecology, to using whole foods in culturally appropriate recipes, sharing stories of ancestors, and tools for healing from the trauma associated with slavery and

economic exploitation on the land. Woven throughout the book is the story of Soul Fire Farm, a national leader in the food justice movement. The technical information is designed for farmers and gardeners with beginning to intermediate experience. For those with more experience, the book provides a fresh lens on practices that may have been taken for granted as ahistorical or strictly European. Black ancestors and contemporaries have always been leaders—and continue to lead—in the sustainable agriculture and food justice movements. It is time for all of us to listen.
