Vapor Cycle Coolant Requirements for Nuclear Space Power Plants - Marion J. Janicke 1964

Liquid metals are especially suited for reactors with high thermal fluxes and high operating temperatures, because of their high thermal conductivities, low vapor pressures, and relatively high volumetric heat capacities. They are stable at high temperatures and in intense radiation fields. Mercury, rubidium, potassium, and sodium are coolants that vaporize at a temperature within the present state-of-the-art metallurgical limits.
